Description

I believe it's quite possible to allow users to enable sidebar on pages which do not have one!..

For example, I would like to add a very short tutorial on adding issues for Orangutan project on the sidebar of new issue page. But the new issue page does not have a sidebar...

I believe if I define RHTML for global content hook and write there content_for :sidebar the sidebar will be enabled on every page. Of course, it's better to define regexps for pages the sidebar should appear on...

Hi Andriy,

First of all - thank you for your work on the various redmine plugins that you have listed here. I am in the proces of incooperating several of them into my own redmine tracker. I was wondering if you had an ETA on this feature? I would personally like a sidebar on the News page, but would prefer not to do manual hackish attempts of my own directly in the .rb code. Thanks in advance!
