Description

Currently we have these six contexts: MainProject, MainIssue, MainActivity... Project, Issue and Activity. Main* contexts allow setting default project, issue and activity. And Project, Issue and Activity contexts allow setting project, issue and activity for a task.

Task context work the following way:

- If there is a current task - set project, issue or activity for this task
- If there is no current task but last task was finished less than 30 minutes ago - set project, issue or activity for last task

However sometimes users are trying to set default project, issue or activity using Project, Issue or Activity contexts... So looks like a good idea is to allow setting them. So another "option" should be added:

- If no current task and last task is too old - set default project, issue or activity...

Of course, in this case and in case of setting project, issue or activity for a last task a warning should be written, e.g.:

```
Orangutan: No current task so setting it for last task...
Orangutan: No current task so setting default ...
```

Maybe also merge MainProject and Project contexts into a single one, MainIssue and Issue into a single one etc...
