Target version:	1.01		
Description For example: I want to know what is my current project. I type "What is my project?". And it should answer. In this particular case a special context should be created. But... There are other options (e.g. activity) which should be shown as well... So a special set of contexts (or one universal context) should be created for this.			
Related issues: Duplicated by Orangutan - Feature #123: User should be able to see his config... <div>Closed20 Apr 201003 Jun 2010</div>
