Target version:	1.02		
Description <p>Redmine is notifying users when something is happenning. This can be new issue assigned to a user, changes to an issue etc. Such functionality is supported by Redmine native bot Messenger. To support this Orangutan should support external notifiers. These can be a special users that is another bots (let's call them "monkeys"). A monkey should be recognized by Orangutan as a special user. By default contexts should not be added to monkey's contexts collection - only special contexts developed for this monkey should be used for it. To achieve this a special Redmine plugin should be developed which would notify Orangutan when something is happening.</p>
