Category:			**Estimated time:**	0.00 hour
Target version:	1.07			

Description

Redmine uses [Textile](#) syntax for text formatting. Currently Orangutan tries to support Redmine Wiki syntax by own... And does it buggy.

Perl has a module Text::Textile, which I believe, could be used in Orangutan to parse Textile syntax. This should be investigated and, if ok, implemented.

Perl module package: libtext-textile-perl
