Description

Earlier I had a demo video showing Orangutan in action...

The video was not actually made from the real chat. It was a JavaScript code simulating chat in browser window. Something like this can be done here instead of video. Such demo can have "sections" - users can choose what they want to see (e.g. "Time tracking", "Issue modifications", "Notifications" etc). Of course the JavaScript demo should support "stop", "pause" functions. This will solve the issue that the video is too long (users will choose what they want to see).

Another problem with the video is that it did not show problems. Orangutan is not so smart as it seems to be from the video... So it would be great to show some funny misunderstandings (between a user and the monkey). Users even will be able to send logs with such misunderstandings (so the JavaScript demo should work with real logs).
