

SCM Creator (+Github) - Feature #1758

Configurable SCM options

30 May 2011 10:01 - Jean-Sébastien Bour

Status:	Closed	Start date:	30 May 2011
Priority:	Normal	Due date:	30 May 2011
Assignee:	Andriy Lesyuk	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	0.1.0		
External issue:			
Description			
We are used to create repositories with these options :			
<pre>git init --bare --shared=group repo.git</pre>			
Maybe you could provide a “options” config entry instead of hardcoding SCM options ?			

History

- Status changed from New to Open
- Assignee set to Andriy Lesyuk

#2 - 30 May 2011 11:15 - Andriy Lesyuk

Nice idea, Jean! I believe I can support options! Thanks for the suggestion.

Regarding .git “extension”? Does it have any special meaning (never used git)?.. Should I add support for this extension?

SCM Creator is to be used along with [Redmine.pm](#)... Not sure if this extension is going to create problems?

Honestly, I have no idea if .git extension is needed for git over HTTP; we only use git over SSH (and locally, of course) and in these modes, the extension of the project’s root folder doesn’t matter, as long as git finds a “.git” hidden folder “somewhere” inside it (I don’t recall its exact finding algorithm). We like to create “repo.git” repositories though, to quickly indicate which SCM is used (we have legacy projects using svn or bzzr).

#4 - 30 May 2011 15:37 - Andriy Lesyuk

- Due date set to 30 May 2011
- Status changed from Open to Closed
- Target version set to 0.1.0
- % Done changed from 0 to 100

Now adding .git by default (this looks to be the “standard” for Git)...

Added also options! Moved --bare to scm.yml... You will need config like this:

```
production:
  git:
    path: /var/lib/git
    git: /usr/bin/git
    options:
      - --bare
      - --shared=group
    url: git
```
