Description

Right now all translations should be specified in placeholders.yml. This way if someone adds a new language the "global" placeholders.yml should be modified.

This should be changed to use xx.yml files... For example:

```
en:
  placeholders:
    view_welcome_index_left: Content, welcome page (left column bottom)
```

At the same time translations in placeholders.yml should be supported as well. It should fall back to this translation if it's missing in xx.yml (or vice versa?). Why so? For new placeholders which should be possible to distribute in separate files!..

History

#1 - 31 Jul 2013 22:07 - Andriy Lesyuk

- Due date set to 31 Jul 2013
- Status changed from Open to Closed
- Assignee set to Andriy Lesyuk
- % Done changed from 0 to 100

Supporting translations through description_hook_name in the main plugin's translation file.
