Category:	Redmine plugin idea	Estimated time:	0.00 hour
Target version:			
Description <p>One of disadvantages of Redmine is that when a not supported language is used it shows "translation missing: xx,...". That is, for example, when a user uses "xx" language and it's not supported he/she sees... nothing! That is not even English!.. Not good!</p> <p>What I think about is to: a) fall back to English and b) convert it to a link allowing to specify translation for "xx" language. Some plugin exists for the a)... and I believe b) is possible...</p> <p>This can (and should) be used for translating the whole Redmine...</p>
