Thanks for reporting! Need to think about this...

For "Link" custom field type in order to add target I will need to add an additional property. This property will be added to other custom field types as well! It can be hidden for other types but... I believe one field type should not influence others so much!

As far as this plugin supports Wiki I guess target can be added to Wiki links (*need to figure how*)... What do you think?

Created an issue in [WikiNG: #1942](#)... I really think this should be done in "Wiki text"!
