Description

It is always interesting to know who is using your project and what do they think about it...

Here is the idea of a new plugin:

This plugin should be able to:

- Collect who is using the project;
- Collect testimonials.

Testimonials should require "Used by" record. "Used by" record should contain:

- Company (can be imported from [Extended Profile](#));
- Company website (can be imported from [Extended Profile](#));
- Site URL (where project is used);
- Reported position (won't be displayed; can be imported from [Extended Profile](#));
- Reported user (won't be displayed; will be detected automatically);
- Logo?..

When "Used by" record is displayed it should contain:

- Company;
- Company website;
- Site URL.

Example: [IFENTUOG](#) ([here](#))

A box "Customers" containing all list (with pager?) can be put on the sidebar.

Testimonials should include:

- Text;
- Company data (used from "Used by");
- User data (used from user and "Used by").

Testimonials should look like:

We always wanted to share our customers' thoughts about our products. This plugin let us do it!
[Andriy Lesyuk](#), CEO in [AndriyLesyuk.Com](#)

The plugin should show one random testimonial on the sidebar...

Testimonials can be moderated.
