Description Hi there, great work at all! However, I have an issue with that download button: I installed the project-settings-tab-hook and this download-button plugin. But I cannot configure the download-button, because the appropriate tab in the settings view doesn't show up. Calling "http://<server>/redmine/projects/<pid>/settings/download" works, but shows an empty page. The log file doesn't give any hint. Any ideas? Regards, David

Ok, got it, stupid usage error by myself...sorry for false alarm.
Simply didn't define a version...

This ticket should be closed!
