<b>Redmine version:</b>	2.0.3		

**Description**

I installed the redmine on subdirectory on Lighttpd. I expect to add WiKi formatting to custom fields. The redmine works fine. The following is my operation step.

1. Install the "Extended fields" plugin whose version is 0.2.0b
2. Add a custom field whose format is WiKi text
3. Create a new issue and fill "[Wiki Page](#)" in the custom fields and submit the issue
4. View the submitted issue and find the custom field is displayed with "[Wiki Page](#)". I expect the display content should be "Wiki Page"
5. Click the custom field and no response. I expect that it can jump to the Wiki page when click the custom field.

I want to click the custom field to implement page jump. I don't know what wrong it is. Please help to check. Thanks.

#### History

- Tracker changed from Bug to Support
- Status changed from New to Open

The "Wiki text" custom field accepts the Wiki content and not the Wiki page name (you can just copy the content of the Wiki page into custom field).

P.S. To achieve what you want you can create a template for your "Wiki page" custom field. See [Custom fields view customization](#).

##### #2 - 10 Oct 2012 19:38 - Haifeng He

Thanks for your reply. Last time, I have uninstalled the extended plugin and I want to try by following your advice. However, I found the custom field whose type is "Link" doesn't work when I reinstall the extended fields plugin after uninstalling the plugin. The following is my operation step.

1. rake redmine:plugins:migrate NAME=extended\_fields VERSION=0 RAILS\_ENV=production
2. rm plugins/extended\_fields -fr
3. service lighttpd restart
4. cd redmine/plugins
5. tar jxvf extended\_fields-0.2.0b.tar.bz2
6. chown www-data:www-data extended\_fields -R
7. cd ../
8. rake redmine:plugins:migrate RAILS\_ENV=production
9. service lighttpd

Please help to check. Thanks.

Could you please check, if the issue is still active? Since that time there was release of [0.2.1...](#)
