| **Description** |
|---|
| It would be cool to allow specifying associations between user custom fields and LDAP attributes. Then at least import data from LDAP on user creation... Would be also cool to sync (see redmine_ldap_sync). |

**History**

**#1 - 01 Mar 2013 15:34 - Ricardo S**

The lastest version of redmine_ldap_sync already allows the association between user/group custom fields and LDAP attributes.

I believe it should now be very simple to use Extended Profile in conjunction with Ldap Sync.
