Please give me the list of custom fields, you use for issues. They are using custom field templates, right?

Thank you for help.

I removed all custom fields and I left only one that is Project type (From this plugin). Status is same. When I submit an issue, I get a 404 Error.

Best Regards,

Copy `_project.html.erb` into `_project.text.erb` and modify it to, e.g.:

```
<% project = Project.find_by_id(custom_field.value) %>
<%= project.name if project %>
```

I have tried it, but the result is the same.

Note: When I left this field empty, there is no error. But an error occurred after the update when I select any value from the "Project List". The same situation exists for other input types. eg. when I left empty a wiki field, there is no problem. I get the error when I enter any values in these fields.

Tips is a great feature. Thanks a lot!

Best Regards,
Adnan
