Extended Fields - Feature #2125

Version custom fields on project overview page?

Description
When I first saw version custom fields, I thought they would appear on the project overview page...

For example, currently I have the "Supports" project custom field... It could be a version custom field. When new version got released, its custom fields would replace the old version's custom fields on the project overview page. This way, we could check what Redmine versions are supported by each separate version of the project.

The problem is, that version custom fields are not shown on the project overview page (only on the project page). Therefore, I never used version custom fields!

How do you think - would it be good to show version custom fields on the project overview page?
