<b>Description</b>  Ruby developers reference to functions prepending the function name with #. So for developers it would be cool if syntax like #function_name generated the link to, e.g., <a href="http://apidock.com">http://apidock.com</a> . Same can be done for other languages, e.g., for PHP: #php:appay_merge.  Also it would be great if we could integrate rDoc to reference also to project's functions.  The syntax can be conflicting with Twitter hash tags though...			

History

#1 - 07 Dec 2012 12:19 - Andriy Lesyuk

- Status changed from New to Incomplete
- Assignee set to Andriy Lesyuk
- Priority changed from Normal to Minor
