<b>Description</b> Just came across these interesting blog-related protocols and thought, that they could be useful for Redmine.  For example: <ul style="list-style-type: none"><li>• Issue:<ul style="list-style-type: none"><li>◦ If some external issue links to an issue, this external issue can be added to related external issues.</li><li>◦ If an external issue links to the project, this issue can be imported into the issue list of the project.</li></ul></li><li>• News:<ul style="list-style-type: none"><li>◦ If a news links to some article, that article can be notified about the link.</li><li>◦ If an article links to some news, Redmine can be notified about the link too.</li></ul></li><li>• Activity:<ul style="list-style-type: none"><li>◦ Anything that links to a project page can be added to the project's activities.</li></ul></li></ul>
