Extended Fields - Support #2196

Default values for "Wiki text" custom fields not being applied

Redmine version:	2.3.1	**External issue:**	

Description

I want to set up a custom field that displays as a hyperlink, but without displaying the target URL (sort of like this).

First I tried the "Link" type, which did let me enter in the link. I saw your instructions on creating custom view templates, but that is somewhat beyond my skill level, so I tried doing this with "Wiki text" type instead. This worked! However, I can't get the default value I specified to fill in automatically when I create a new issue. The field is always blank until I fill it in.

Example configuration:

Name	ECO
Format	Wiki text
Min - Max length	0 - 0
Regular expression	`"[A-Za-z0-9_\\s-]+":http://servername/ECO/C\\d{5}$`
Default value	`"Link":http://servername/ECO/C00000`
Hint	Replace only C00000

Thank you for your work by the way; your plug-in is exceedingly useful!

Did you use version from SVN repository?

#2 - 06 Sep 2013 21:24 - Andriy Lesyuk

- Target version deleted (0.2.2)

That's weird, because the "Wiki text" does not support regular expression... I guess you used some older version (not the one from SVN).

I can't reproduce this on the latest source code (the default value gets into the form). In your case, I think, the regexp prevented the default value to get there... The regexp does not look to be correct (\s can't be used inside [...], I believe).

Sorry for the long delay in responding. I will update to the latest version from SVN, and see if I'm able to reproduce the issue. We recently upgraded to the new 2.3-stable build (2.3.3), so this will verify your plug-in's functionality with the latest Redmine version as well.
