Description

I have a plugin installed that adds an extra tab to admin>>users>>edit page.
The problem is with contact_form/assets/javascripts/contact_jquery.js/function fix_enable_contact_form_position().
Since I have an extra tab with a box tabular section the function is adding the setting there.

Is there a way to have it find the last box tabular on the general tab and not the last one in the form?

I added an issue at the Redmine site that will allow you and others to add settings to or after the Preferences section in "My account" or "Users>>Edit".

The view hooks I requested in [#14614](#) have been added in r12085. This will help me in the plugin I am working on and I hope it helps you too.

- File contact_form_redmine_2.4 added

I wrote a patch against your current trunk for use when Redmine goes to 2.4. It will use your current code for Redmine versions under 2.4 and the new view hooks for versions of Redmine greater than or equal to 2.4.

This has fixed my issues with using Contact Form along with Redmine Local Avatars. Thanks again for your great Redmine contributions!

Just realized I forgot to delete the old part in the patch I posted above. Also, the check will not work after they release 3.0. I will upload a new patch a little bit later.
