Description <p>I wonder, if the Hooks Manager can allow a more flexible customization... For example, can it support hook's arguments to display content conditionally?.. Using some JS tricks (like ones used for :view_wiki_inline_content) of course it can, but can it be easier?</p> <p>I guess the best option would be to introduce some templating language, which would allow something like:</p> <pre><!-- ifeq project.name, 'Hooks Manager' --> ... <!-- else --> ... <!-- end --></pre>
