Hooks Manager - Feature #2209

A templating language support

Description

I wonder, if the Hooks Manager can allow a more flexible customization... For example, can it support hook's arguments to display content conditionally?.. Using some JS tricks (like ones used for :view_wiki_inline_content) of course it can, but can it be easier?

I guess the best option would be to introduce some templating language, which would allow something like:

```
<!-- ifeq project.name, 'Hooks Manager' -->
...
<!-- else -->
...
<!-- end -->
```
