Description

This is not obvious but in Ruby you can add sidebar to pages, which do not have the one, using something like:

```
<% content_for(:sidebar) do %>
   ...
<% end %>
```

Of course, this can't be done in the Hooks Manager using HTML! At least for now...

But maybe we can implement this somehow? For example:

Sample URL: http://projects.andriylesyuk.com/.../time_entries/...

☑ Add content to the sidebar:

Hook: view_timelog_edit_form_bottom

Another option is to support this in the templating language (see #2209).

- Status changed from Incomplete to Open

Just a note: not every hook is able to add the content for sidebar! So, I guess, a new hook property indicating this should be added.
