Description

Section hierarchy is build "on top" of the project hierarchy, i.e., first the sections go, then projects. A project <u>can't</u> define sections for its subprojects – all they are forced to use the section of the parent project.

The plugin does a lot to handle this. Thus, you just won't be able to set the project section for a child project! But...

When you create a new project the creation form allows you to choose the parent project and the project section at the same time... The latter, actually, will be just ignored, but.

The project form should use JavaScript to prevent confusion! Thus, when user selects the parent project the project section should disappear or become disabled and so on.

Associated revisions

Revision 7 - 11 Sep 2013 22:45 - Andriy Lesyuk

Added JS for #2218, added permission for #2217 and fixed a bug related to section path

History

#1 - 10 Sep 2013 13:34 - Andriy Lesyuk

- Target version set to 0.0.1b
