<b>Description</b>			
If an apostrophe gets found inside the URL it gets replaced... So the URL becomes broken! See <a href="#">#2152</a> !			
While such symbols as apostrophes are not, actually, allowed in URLs, this can be a problem...			
Also replacing one symbols with others can cause other problems, not known at the moment...			
So, maybe, it's worth allowing to turn off all such replacements? For example, in Administration → Plugins → WikiNG → Configure?.. <b>Vote</b> or <b>watch</b> this issue, if you agree!

- Subject changed from *Disabling typography engine?* to *Option to disable glyphs?*

#### #2 - 22 Sep 2013 16:42 - Ivan Cenov

While such symbols as apostrophes are not, actually, allowed in URLs, this can be a problem...

What about this solution: if apostrophe (or other not allowed symbol) is found in URL, then this is not URL and is not rendered as URL. Instead it is rendered as raw text. This solution does not need configuration.
