Description	
<p>In Redmine's Wiki content we can reference to issues, Wiki pages, news, forum topics, and so on. But we can't reference to blog posts! Yet...</p> <p>I believe the syntax for the blog post reference should look like:</p> <pre><<blog-post-slug display text>></pre> <p><u>and:</u></p> <pre><<#X display text>></pre> <p>Certainly, this should work only if the <code>base_url</code> was specified in <code>redpress.yml</code>...</p> <p><i>Additionally, perhaps, a new option, e.g., <code>permalink_format</code>, should be supported.</i></p>
