Description

Here is the quote from a user:

In the application.css file there is a background color defined for code blocks. This causes text in code blocks to white out portions of the alternating background. I don't know if this is a bug, but I noticed that the screen shots of the theme look fine (no white-out), but the actual theme content looks wrong (contains white-out). If this is a bug, comment out the background-clor: #fff; to fix it. I've made other minor changes to my copy, but it might be line 260.

If it's not a bug, then you probably should update your screenshots.
