<b>Redmine version:</b>	2.3.3		
<b>Description</b> We needed support for download selection of multiple version attachments as we have platform specific downloads for some products. For this I created the attached patch (against trunk version). For us the current patch suffices but I think for general application the 'multiple download' support could best be made optional configurable through the settings. Also it might be nice if a regexp could be specified by which to select the presented downloads from the list of attachments of a Version. Anyway, do what you want with it  Btw, I did not take ChiliProject support into account as we don't use that, sorry.
