Description

Taking my site:

If an article has all three translations and user languages include all three languages, an index page shows all three posts! To some extent it's fine, but...

I prefer having such posts grouped under the primary one, as shown on the mock-up:

Here flags will be clickable and will point to corresponding translations.

The problem is that I don't know, how to implement this (even not sure, if it's possible)...
