<b>Description</b>			
<p>Great plugin, but as a noob I'm struggling to achieve the following:</p> <p>w've got a custom field (option field, select2 to have search capability) called "IT-Service"; based on changing the IT-Service, we would like to change/suggest an assignee (which can be overridden manually).</p> <p>My idea so far: create a hash array, mapping IT-Services to users;</p> <p>Would you see the Hooks Manager as an appropriate solution for this scenario?</p> <p>Thanks a lot in advance for your input!</p>
