Extended Fields - Bug #2348

Buggy implementation at _list.html.erb

Description

I found that you have rewritten _list.html.erb

At original file was:

<%= raw query.inline_columns.map {|column| "<td class=\"#{column.css_classes}\">#{column_content(column, issue)}</td>"}.join %>

You have changed it to:

<% inline_columns.each do |column| >
<%= content_tag 'td', column_content(column, issue), :class ⇒ column.respond_to?(:css_classes) ? column.css_classes : column.name unless column.nil?%>
< end %>

now, when other plugin add new field as HTML, your code change it to HTML entries and HTML code is visible directly (it is not rendered as supposed)

Because of that I had problems with it at redmine_tags plugin. Issue is here: https://github.com/ixti/redmine_tags/issues/93

It would be nice if you can correct this issue.
