

Bug or it is intentionally done this way?

Description

I compared blocks' definitions in **wiking.css** and **red-andy.css**. Here they are:
red-andy.css:

```
div.wiking.warning {
  background-position: 6px 4px;
}
div.wiking.notice {
  background-image: url(../images/red-andy/notice.png);
  background-position: 6px 5px;
  background-color: #e9facd;
  border-color: #b8d573;
  color: #005f00;
}
div.wiking.tip {
  background-image: url(../images/notice.png);
  background-color: #ddedf2;
  border-color: #759fcf;
  color: #00365f;
}
```

wiking.css:

```
div.wiking.warning {
  background-image: url(../images/warning.png);
  color: #863D09;
}
div.wiking.notice {
  background-image: url(../images/notice.png);
  background-color: #c5e7f8;
  border-color: #759fcf;
  color: #00365f;
}
div.wiking.tip {
  background-image: url(../images/tip.png);
  background-repeat: no-repeat;
  background-color: #eee;
  border-color: #bbb;
}
```

In red-andy.css, notice.png is referred only, while in wiking.css all three notice.png, warning.png and tip.png are referred. Is this OK or it is a bug?

I saw this when adding another block ("question" in my case and added new picture "question.png").

- *Tracker changed from Bug to Support*
- *Status changed from Open to Won't Fix*
- *Target version deleted (1.1.0)*

It's intentional. For the [Red-Andy](#) theme both these files are loaded – red-andy.css just modifies what's declared in wiking.css.

Here, for Red-Andy I used a different image for notice and the original notice image for tip.
