

Extended Fields - Feature #2383

Multiselect for Project fields

Description

I'd really like to be able to add a custom field of type Project to issues so that I can indicate multiple other projects that should be tested before closing an issue that involved code-changes; e.g.:

- if two projects share any code, when implementing a feature for one of them there's the possibility of accidentally affecting the other, and the other flagged projects should be tested before closing the issue
- a project that is part of a larger system may have severe bugs that are known to affect other parts of the system, in which case those other flagged projects should be tested before closing the issue

It's awkward (at best) to implement such a field where only *one* auxiliary project can be selected.
