Target version:			
Description			
What if a media became broken? There should be a way to mark such media as the one, that needs to be replaced.			
This can be done with a new special "broken" flag (byte) in the CDI database. An alternative option is to use a property in a special properties file. In any case this flag is to be set manually, e.g., through the cdmodify tool (see #2426).
