<b>Description</b>			
<p>To mirror code onto GitHub, I call git under the www-data user. Git, in turn, is using SSH, which needs to store known_hosts file somewhere. Currently, it's stored in www-data's "home" directory /var/www, what is not very secure (probably - no, it's not accessible via web, but).</p> <p>Git 2.3+ supports the special environmental variable GIT_SSH_COMMAND, that allows to specify parameters for SSH. This variable can be used to specify a different location for the known_hosts file as follows: ssh -o UserKnownHostsFile=/path/to/file. However, I'm using Debian jessie for now, in which Git is of the version 2.1.</p> <p>I create this ticket to remind me about the need to fix this, after I upgrade my server.</p>
