In any case Orangutan should break task for the night... So in addition to continue the query can be "Break", right?

Working on Continue context right now...

Just a note:

* Continue won't work if there is another <u>current</u> task

That is... if you get a question on the morning about unfinished yesterday task - don't use Continue!.. Because the previous task is still active!

In this case you can answer "Break" on the question (it should work - however please test and report if it does, thanks).
