**Description**

The idea is to allow user to specify what should be printed when user requests to list issues...

For example, we on the project use custom field "Alt ID" containing project ID of issue. This is a very important field for us. And I would like to see it when issues are listed.

So the format should support native fields and custom fields. That is it should look like this (just an example):

```
User: List issues this way: "<tracker> #<id>: <subject> <upc id>"
```

The format options and syntax is to be defined...
