Description

I personally like to ask people what do they think about some feature or similar... There are many other situations where surveys are needed... For example, one could create a survey: "Are you going to cinema this evening with me?"...

Orangutan could help here... Theoretically it's quite possible to create a context which would be responsible for creating and (this can be another context) carrying out surveys. Let's check sample:

```
Author: I want to create a survey
Orangutan: Give it a question!
Author: Are you going to cinema this evening with me?
Orangutan: What can be an answer?
1. Yes/No/Maybe
2. Text
3. Number
Author: 1.
Orangutan: Ok... Going to carry it out.

Orangutan: User author@jabber.sjua wants you to answer the following:
Are you going to cinema this evening with me?
Orangutan: What would you answer?
User: Yes
Orangutan: Ok... I'll let him know.
```

Crazy idea, isn't it? Just an idea!..

Do we need such context? Vote if we do... I'm not sure...
